

AVONIC

USER MANUAL

English Version

HOW IT WORKS

THE SMART GUARDIAN

Most of the time, AVONIC acts as a "smart guardian" that constantly watches the environment inside the bin.

Watches the Heat!

- If the bin gets too hot (above 30°C), the system automatically sprays a cool mist to bring the temperature down.

Checks the Moisture

- If the soil gets too dry, it activates the sprinklers to keep the worms hydrated.

Clears Bad Air

- If harmful gases like ammonia build up, it turns on the exhaust fan to flush them out.

⚡ DUAL POWER SYSTEM

Direct Power

- When electricity is available, the Smart Battery Charger powers the machine from the wall.

Battery Backup

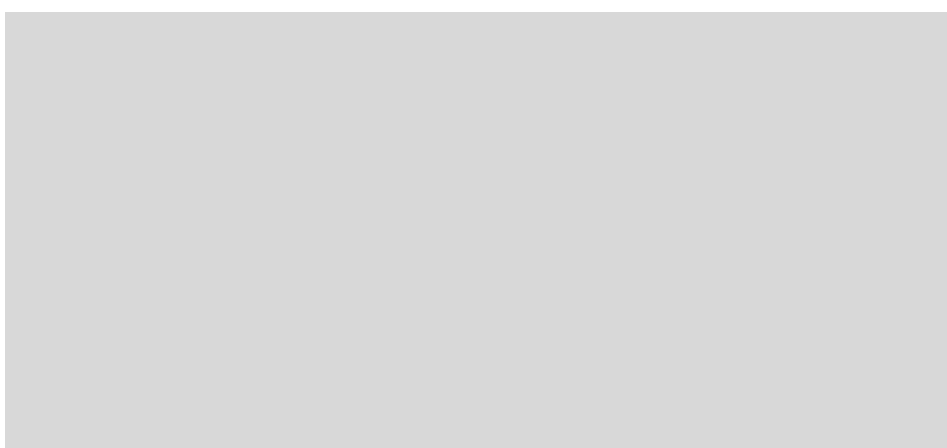

- If a brownout occurs, the system automatically switches to its built-in Sealed Lead-Acid Battery without interruption.

IMPORTANT TIP

-
- Always keep the charger plugged in so the backup battery is ready for emergencies!

YOUR JOB

The system is not 100% automatic. You still need to refill the water tank when it runs low and manually harvest the Vermicast and Worm Tea when they are ready.

SETUP

OFFLINE

1 CONNECT LOCALLY

- Turn on your AVONIC machine

- and connect to the AVONIC bin local WiFi network.

2 LOG IN

Log-in with the given account.

3 LET IT RUN (OR TAKE CONTROL)

This is an Automated System and it doesn't necessarily need you to do manual actions.

Instead, the manual actions are just there to give you user freedom.

ONLINE

1 GO TO THE WEBSITE

Go to the Avonic online website.

2 LOGIN OR REGISTER

Login to your existing account or register for a new one.

3 CLAIM YOUR BIN

Type in the unique ID number printed on your manual to connect your system.
